

Level Editor User Guide

Screenshot

Panel Introduction

- Entity Inspector
- Entity Spawner
- Assets
- Debug Info

Entity Inspector:

This panel is used to observe and control the generated Entities. Users can use this panel to observe information such as the Entity's position, scale, orientation, and speed. This information can also be manually adjusted using this panel.

Entity Spawner:

This panel is used to generate entities, such as players, enemies, and grids, and can also be used for testing with Trigger music.

Assets:

This panel displays our Assets files. By looking at the files in the list, you can directly view the files generated by /load/.

Debug Info:

This panel is used to monitor our engine status: It will display the FPS and the number of Entities currently generated, as well as some operation instructions.

Taskbar Introduction

- File
- Windows
- Editor

File:

This interface includes functions for saving, loading, and exiting levels.

Users can use this interface to select the level information they want to read, which will then be reflected in the Editor.

Users can use this interface to save the current level for later re-entry.

Windows:

Users can manage various panels through this interface.

Editor

Users can enter Play/Editor mode through this interface. In the Editor, users cannot control player movement, but they can control camera zoom.
